**Gene Drive** has to do with **CRISPR Cas-9**, it's probably in the shots! Once the "gene sequences" are "driven" into the genome they're there for good!

To make a protein you have what's call an open reading frame – which includes a start and stop codon, like a capital letter and full stop in a sentence. It doesn't appear that this "mRNA vaccine" sequence makes spike protein because (according to anonymous geneticists) within the open reading frame they found all these start and stop codons that shouldn't be there.

Inside the open reading frame, the start/stop codons had sequences that coded for **mutant measles, hypothetical proteins** – that don't exist in nature, and **guided RNA (gRNA)** instead of mRNA" which were **specifically guided towards two of our human genes**. It's a double stranded cut, and puts it into both of our DNA stands.

Connection with **Frederick Taylor Gates**, Rockefeller Medical School, 1918 Spanish flu and more...

- Dr **Eleanor McBean**, who was a child during the 1918 pandemic, "nobody died who didn't take these vaccines".
- Observations of the doctors of the time, those who died were being trained on the use of the Telegram, they had "telegraph disease". [Read "**The Invisible Rainbow**" – electrification and its connection to dis-ease]
- In 1918 the newspapers didn't write much, but by 1920 the propaganda arm made it a big
